

Tips for the Fiskars rotary hand drill:

- Make sure you have a wood block under your project when you are drilling! The drill is very sharp and WILL drill through your craft table!
- It is hard to hold the project and use the drill alone. Either have someone help you hold the project steady, or use a vice to firmly, but gently, hold your project still. In a pinch, you could place your protective wooden block on the floor, hold your project with your feet and lean over to drill the holes. In all cases, be very careful and wear the necessary protective equipment!
- For most album projects, K2R recommends using the largest of the four drill bits provided with the drill.
